

VARAGA HAGHOUBIANS

JUNIOR SUPPLY CHAIN & DATA ANALYST

Demand Planning · Data Analysis · Industrial Engineering

Turin, Italy | +39 351 609 7585 | varaga.haghoubians@gmail.com

linkedin.com/in/varagahaghoubians | github.com/VaragaHaghoubians

Available immediately, full-time | Internships and junior roles | Open to relocation in Italy

PROFESSIONAL SUMMARY

• **Industrial Engineering graduate** with hands-on experience in inventory data management, production reporting, and industrial data analysis through internships at Arvest and Eurix.

• Developed **Holt-Winters** demand forecasting models in personal projects using synthetic data; analyzed stock levels and supported **reorder proposals** using Excel. Reduced weekly reporting preparation time at Arvest by **approximately 50%** (operational estimate).

• Use **Excel**, **SQL**, and **Python** for data analysis. Currently completing an MSc in Stochastics and Data Science at the University of Turin, expected April 2027.

TECHNICAL SKILLS

Tools: Python · SQL · Advanced Excel · Git/GitHub

Demand planning (portfolio): Holt-Winters forecasting, MAPE, forecast accuracy, EOQ, reorder points

Inventory and operations: stock, consumption and safety-stock monitoring, reorder proposals, plan vs actual, KPI reporting

Data analysis: data cleaning, outlier handling, feature engineering, anomaly detection

INTERNSHIP EXPERIENCE

Data Science Intern (curricular internship and MSc thesis) | Apr 2025 – Apr 2026

Eurix · Turin, Italy

• Developed a reproducible **Python pipeline** to clean and align real HVAC/BMS sensor and weather data into 30-minute time series, handling missing values, outliers, and timestamps.

• Engineered time-series features and trained two seasonal **LSTM autoencoders** optimized with **Optuna**; test-set reconstruction **R^2**: 0.972 (summer) and 0.950 (winter).

• Produced indicators of potential anomalies and **technical reports in Italian and English**; the results do not constitute confirmed faults.

Industrial Engineering Intern | Aug 2020 – Aug 2021

Arvest · Tehran, Iran

• Digitized paper records for more than 50 material and item types in **Excel**, supporting the **traceability** of raw materials, semi-finished goods and finished products.

• Directly monitored inventory levels, consumption and **safety stock** for the three raw-material groups A, B and C against the production plan; reviewed data for the remaining groups and prepared **supplier comparisons** and **reorder proposals** for the purchasing manager.

• Compared actual versus standard material consumption and actual versus planned production in **Excel**, and monitored **downtime** across six machines; prepared weekly inventory, production and purchasing reports (**approximately 50%** less preparation time, operational estimate).

EDUCATION

MSc in Stochastics and Data Science · University of Turin | in progress, expected Apr 2027

Graduate studies in Engineering Management · Azad University, Iran | 2019–2021, program not completed (no degree awarded)

BSc in Industrial Engineering · Azad University, Iran | foreign degree, Oct 2014 – Jun 2019

SELECTED PROJECTS

Demand Forecasting, Inventory and Planning · Personal Portfolio

Independent exercises using synthetic datasets, not company work

• Compared Holt-Winters with a seasonal naive baseline on synthetic data: MAPE of 2.79% versus 8.50% over 12 test months, a 67.2% relative reduction in error. Applied EOQ, safety stock, and reorder points in simulated exercises.

• Developed SQL analysis exercises (JOIN, CTE, window functions) and constrained production-mix optimization with PuLP; scripts and results documented in the portfolio.

Portfolio: github.com/VaragaHaghoubians/industrial-analyst-portfolio

Steel Manufacturing Performance Analysis · Personal Project

Synthetic dataset, not data from an actual manufacturing plant

• Analyzed 3,780 simulated machine-shift records across seven machines to assess OEE, plan versus actual, scrap, cycle times, and downtime Pareto analysis.

• Produced seven notebooks with KPIs, charts, exports and a summary of potential capacity constraints.

Portfolio: github.com/VaragaHaghoubians/steel-manufacturing-operations-analytics

Telecom Customer Churn and Segmentation · University Project

Real public dataset

• Analyzed 3,150 records with 13 variables, using K-Means, PCA, Local Outlier Factor, and Decision Tree classification.

• Evaluated the classifier using accuracy, precision and recall, accounting for class imbalance in churn.

Industrial Sensor Anomaly Detection · Thesis in Collaboration with Eurix

Confidential real company data; public demonstration with synthetic data

• Analyzed HVAC/BMS time series and weather data, comparing seasonal patterns and setpoints using a Python pipeline and two LSTM autoencoders.

• The R^2 metrics of 0.972/0.950 refer to test-set reconstruction, not fault-detection accuracy.

LANGUAGES AND RECOGNITION

Languages: Italian B2 · English C1 · Armenian native · Persian professional

Awards (2025): 1st place (team) in the Michelin Students Green Challenge and the UniTo–SKF Students Indigo Challenge.
